

Add the Power of RFID to Any System

FileTrail's RFID RF-Integrator

Introduction

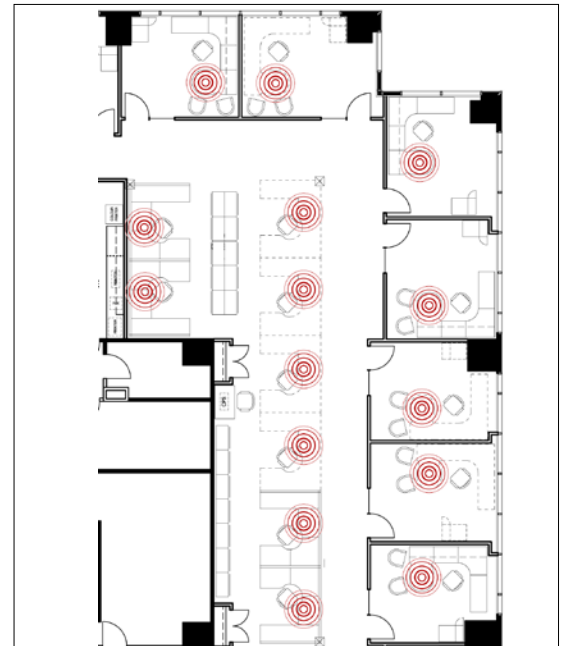

The RF-Integrator is a comprehensive collection of .Net Web Services that gives you a cost-effective way to quickly add the power of RFID technology to your existing applications. The RF-Integrator allows you share common definitions of people and location and post tracking and location information into existing systems.

Added Flexibility and Functionality

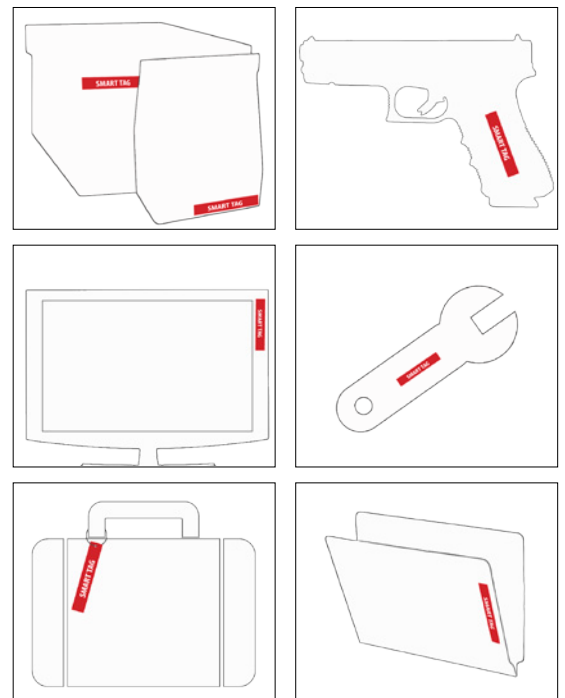

The RF-Integrator supports batch synchronization of users and location, as well as batch retrieval of RFID-based transactions. Flexibly designed, the RF-Integrator works with almost every existing application including barcode-based tracking systems, tracking systems that are built to use older RFID technologies, and financial system.

FileTrail's RF-Integrator Lets You:

- ▶ **Realize a Faster ROI** - RFID is easily integrated with your current tracking applications.
- ▶ **Save Time** - Quickly track, locate and manage items using RFID.
- ▶ **Save Labor** - RFID helps streamline processes, automate manual tasks and gain access to item information from any desktop.

Define RF-Enabled Zones by linking RFID Hardware to locations defined in an existing tracking, inventory or financial system.

A FileTrail provides RFID tags especially suited for tracking paper documents, electronic media, IT assets, furniture, equipment, evidence, and weapons.

Realize the Well-Established Benefits of RFID Technology

Find Missing Items

Gain the ability to locate missing or misplaced items using our portable RFMobile™ RFID reader. Just point and scan. An on-screen message and audible alert notifies you when a missing item is found.

Reduce Audit Time

Using the RFMobile, you'll be able to complete audits 80% faster. You'll also be able to update the current location of items, no matter where they are in the office.

Automatically Track Items

With FileTrail's Passive Tracking™ concept, RFID sensors in ceilings and walls update the location of items as they move from person to person—completely eliminating the need for staff compliance.

Improve Item Checkout

Utilize your existing security badges to simplify item checkout. FileTrail RFID technology reads staff badges and automatically records and tracks items as they are removed.

Find Out More Today

Start getting the most out of your existing tracking applications. Call FileTrail at 800.310.0314, or email us at sales@filetrail.com. You can also visit our website at www.filetrail.com to learn more.

Technical Information:

- ▶ FileTrail developed the RF-Integrator using Microsoft .Net v3.5 using WCF (Windows Communication Foundation).
- ▶ The suite of Web Services support multiple transport protocols, including HTTP and WS HTTP, and provides industry standard messaging including SOAP (1.1 or 1.2) and MTOM.
- ▶ The RF-Integrator runs on Windows Server 2003/2008 (with IIS) and uses a SQL Server 2005/2008 database.

"I am impressed with how quickly the implementation process was done, the seamless integration with our current Records Management system, and the friendliness of the FileTrail interface. The technology is really amazing and I cannot say enough great things about the FileTrail team and their product."
