

## FileTrail's RFID SmartTag

The FileTrail RFID SmartTag is a paper-thin label that contains a unique ID that can be read from 6 inches to over 20 feet away. This allows you to quickly inventory, locate, check-in and check-out items quickly in large batches.

The SmartTag can be placed on any item you want to track, including file folders, boxes, computer equipment, evidence, firearms and assets.

SmartTags can be instantly read in batches. This eliminates the need to handle items individually, and makes finding critical items easy.

The SmartTag is pre-programmed with a globally-unique ID so you can eliminate the programming step and avoid the possibility of duplication.

The SmartTag is guaranteed for the life of the item initially tagged. FileTrail will replace any SmartTags that fail at no cost to you.

### Assignment

FileTrail has created two fast and easy processes to assign tags to existing items. One process is used day-forward or during data entry. The batch assignment tool makes back-file conversion fast and easy.

### Embedded

FileTrail can embed SmartTags in other labels, such as color coded end-tab labels for file folders. However, experience has shown that this doesn't really save labor and dramatically increases material costs because of normal waste.

### Placement

The SmartTag is engineered to be placed on an exposed surface. The purpose is to make clear whether an item has been tagged or needs to be tagged before you move them. The Standard Tag is designed to be low-cost but durable. It is protected by an adhesive-backed label and is encased in a mylar coating that is both wear- and water-resistant.

FileTrail's RFID SmartTags use the latest GEN 2 RFID technology for worldwide operation.

#### Options:

Standard Tag	Adheres to paper, wood, or plastic surfaces (files, boxes, documents, evidence, etc.)
Metal-Mount Tag	Readable on metallic or metal surfaces (tools, shelving, etc.), adheres with epoxy
Hanging Tag	Used on items that cannot be altered or have no flat surface (evidence, property, etc.)
Embedded Tag	The 1/8-inch flexible wire-tag is perfect for inserting in the stock or grip of firearms.
Asset Tag	Epoxy-mountable tag for assets (servers, switches, hard drives, tools, etc)

Tag files, documents, etc.

Tag evidence bags and boxes.

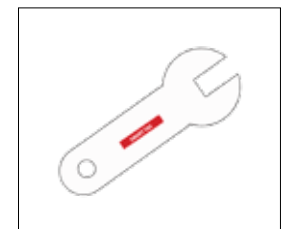

Tag weapons with an embedded tag inside the grip.

Tag property with hanging tags.

Tag technology and other assets.

Tag tools with metal-mount tags.
